

WW-120

ODOR CONTROL & ELIMINATION

DESCRIPTION:

WW-120 is an odor elimination formula designed for use through aerosol, mixing/injection, or other spray systems where malodors can be problematic. **WW-120** is safe for use in many applications and will not stain or damage surfaces and equipment. It is non-hazardous and is fully biodegradable.

PROPERTIES

- Concentrated for economical use dilutions
- Non-hazardous, non-corrosive, and non-toxic
- Readily biodegradable
- Easy to use
- Safe for the environment
- Not harmful to surfaces and equipment
- Non-staining
- Works quickly with intimate contact with the odor source

USES

WW-120 is recommended for use to eliminate malodors at their source. Uses include:

- Wastewater treatment
- Sludge tanks, holding ponds
- Swine/poultry/cattle/livestock pens and barns
- Washrooms and changing areas
- Ink and dye applications
- Water damage
- Trash bins, garbage areas
- Slaughtering operations

As each odor control situation is different, use levels will vary from application to application. Typical dilution ranges vary and range from 1 ounce **WW-120** to 5 gallons of water for ink/dye use, to perhaps as strong a solution as 8 ounces per gallon (16:1) of water for stronger/persistent odor problems. Direct contact with the odor causing chemical is necessary for complete odor elimination. Standard starting dilutions will range from 10:1 to 20:1. We suggest experimenting with stronger solutions and working backwards until a minimum effective concentration is achieved (MEC). Ask your local rep with assistance in finding the proper dispensing equipment!

WW-120 is available in 5, 30, and 55-gallon drums
